- CLEAPSS [Guidance for science departments returning to school after an extended period of closure](#)
- Conducting a SEND risk assessment during the coronavirus outbreak guidance can be found [here](#)
- COVID-19: guidance on supporting children and young people's mental health and wellbeing can be found [here](#)
- Actions for early years and childcare providers during the coronavirus outbreak can be found [here](#)
- Coronavirus (COVID-19): implementing protective measures in education and childcare settings can be found [here](#)
- Safe working in education, childcare and children's social care settings, including the use of personal protective equipment (PPE) can be found [here](#)

General staff and pupil advice on limiting the spread of coronavirus in the Educational Setting

Government advice is clear PPE, including facemasks should be taken into account where employees could be put at risk. The use of such PPE does not replace or reduce the need to follow the government guidance in relation to hygiene practices

Frequently clean and disinfect objects and surfaces that are touched regularly, using your recommended cleaning products.

- Wash your hands with soap and water often – do this for at least 20 seconds.
- Use hand sanitiser gel if soap and water are not available.
- Staff and Pupils should wash their hands as soon as they get to school and when they arrive home, after they blow their nose, cough or sneeze, before they eat or handle food.
- Cover mouth and nose with a tissue or a sleeve (not hands) when you cough or sneeze.
- Put used tissues in the bin immediately and wash your hands afterwards.

Handwashing techniques advice can be found [here](#)

What happens if someone becomes unwell at an educational setting?

If anyone becomes unwell with:

- a high temperature – this means you feel hot to touch on your chest or back (you do not need to measure your temperature)
- a new, continuous cough – this means coughing a lot for more than an hour, or 3 or more coughing episodes in 24 hours (if you usually have a cough, it may be worse than usual)
- a loss or change to your sense of smell or taste – this means you've noticed you cannot smell or taste anything, or things smell or taste different to normal

There are various other symptoms discussed in the media around children but this is the threshold set by the NHS process for testing and we must adhere to these.

In an education or childcare setting, they must be sent home and advised to follow the [COVID-19: guidance for households with possible coronavirus infection guidance](#) which sets out that they should start to self-isolate for at least 10 days and should arrange to have a test to see if they have coronavirus.

If a parent has called 119 and they have been told they don't need a test as their symptoms aren't 'due to COVID,' then the child can attend school if they are not displaying any symptoms.

If a child is awaiting collection, they should be moved, if possible, to a room where they can be isolated behind a closed door, depending on the age of the child and with appropriate adult supervision if required. Ideally, a window should be opened for ventilation. If it is not possible to isolate them, move them to an area which is at least 2 metres away from other people.

If they need to go to the bathroom while waiting to be collected, they should use a separate bathroom if possible. The bathroom should be cleaned and disinfected using standard cleaning products before being used by anyone else.

PPE should be worn by staff caring for the child while they await collection if a distance of 2 metres cannot be maintained (such as for a very young child or a child with complex needs).

In an emergency, call 999 if they are seriously ill or injured or their life is at risk. Do not visit the GP, pharmacy, urgent care centre or a hospital.

If a member of staff has helped someone who was unwell with a new, continuous cough or a high temperature, they do not need to go home unless they develop symptoms themselves (and in which case, a test is available) or the child subsequently tests positive (see 'What happens if there is a confirmed case of coronavirus in a setting?' below). They should wash their hands thoroughly for 20 seconds after any contact with someone who is unwell. Cleaning the affected area with normal household disinfectant after someone with symptoms has left will reduce the risk of passing the infection on to other people. See the [COVID-19: cleaning of non-healthcare settings guidance](#)

What happens if there is a confirmed case of coronavirus in a setting?

When a child or staff member develops symptoms compatible with coronavirus, they should be sent home and advised to start to self-isolate for 10 days. Their fellow household members should start to self-isolate for 14 days. All staff and students who are attending an education setting will have access to a test if they display symptoms of coronavirus, and are encouraged to get tested in this scenario.

Where the child or staff member tests positive, the rest of their class or group within their Bubble should be sent home and advised to start to self-isolate for 14 days and encouraged to take a test. If a test is taken and it is negative, they cannot return to the setting as they still need to remain isolating for the 14 day period as they are regarded as 'close contacts'. The other household members of that wider class or group do not need to self-isolate unless the child or staff member they live with in that group subsequently develops symptoms.

Parents to be informed about any confirmed cases of Coronavirus in their child's Bubble.

If an adult in an adult Bubble e.g. the office or kitchen tests positive for coronavirus then they stay at home for 10 days and their Bubble starts to self-isolate for 14 days and take a test.

As part of the national test and trace programme, if other cases are detected within the cohort or in the wider setting, Public Health England's local health protection teams will conduct a rapid investigation and will advise schools and other settings on the most appropriate action to take. In some cases, a larger number of other children, may be asked to self-isolate at home as a precautionary measure – perhaps the whole class, site or year group. Where settings are observing guidance on infection prevention and control, which will reduce risk of transmission, closure of the whole setting will not generally be necessary.

Further guidance:

<https://www.nhs.uk/conditions/coronavirus-covid-19/self-isolation-and-treatment/when-to-self-isolate-and-what-to-do/>

Engage with the NHS Test and Trace process.

Schools must ensure that staff members and parents/carers understand that they will need to be ready and willing to:

- book a test (<https://www.gov.uk/guidance/coronavirus-covid-19-getting-tested>) if they or their child are displaying symptoms. Staff and pupils must not come into the school if they have symptoms, and must be sent home to self-isolate if they develop them in school. All children can be tested, including children under 5, but children aged 11 and under will need to be helped by their parents/carers if using a home testing kit
- provide details of anyone they or their child have been in close contact with if they were to test positive for coronavirus (COVID-19) or if asked by NHS Test and Trace self-isolate (<https://www.gov.uk/government/publications/covid-19-stay-at-home-guidance/stay-at-homeguidance-for-households-with-possible-coronavirus-covid-19-infection>) if they have been in close contact with someone who tests positive for coronavirus (COVID-19), or if anyone in their household develops symptoms of coronavirus (COVID-19)

School will ask parents and staff to inform them immediately of the results of a test:

- if someone tests negative, if they feel well and no longer have symptoms similar to coronavirus (COVID-19), they can stop self-isolating. They could still have another virus, such as a cold or flu – in which case it is still best to avoid contact with other people until they are better. Other members of their household can stop self-isolating.
- if someone tests positive, they should follow the ‘stay at home: guidance for households with possible or confirmed coronavirus (COVID-19) infection’ (<https://www.gov.uk/government/publications/covid-19-stay-at-home-guidance>) and must continue to self-isolate for at least 10 days from the onset of their symptoms and then return to school only if they do not have symptoms other than cough or loss of sense of smell/taste. This is because a cough or anosmia can last for several weeks once the infection has gone. The 10- day period starts from the day when they first became ill. If they still have a high temperature, they should keep self-isolating until their temperature returns to normal. Other members of their household should continue self-isolating for the full 14 days.
